## EDUCATION

**IIT Roorkee** **May 2022**
*Bachelor of Technology, Biotechnology*

- **CGPA: 9.123,** Departmental Gold Medalist
- **Thesis Project**: Predicting the function of hypothetical proteins using Machine Learning
- **Relevant Courses:** Data Structures, Computer Programming, Bioinformatics

**St. Columba's School** **Mar 2018**
*Intermediate (Class XII)* *New Delhi*

- **Grade: 96%**

## WORK EXPERIENCE

**Armor** **Sep 2026 – Present**
*Data Science & Software*

- **Armor Overview:** a SEBI-registered investment adviser backed by South Park Commons, Google for Startups and NVIDIA Inception, trusted by 1,000+ Indians to plan and grow their wealth.
- Building the data pipelines behind Armor's wealth analytics, bringing users' holdings, market feeds and corporate actions into one continuously updated picture of their finances.
- Developing the analytics that turn that data into each user's Armor Score and portfolio insights.

**Sprinklr** **Jul 2022 – Dec 2023**
*Data Scientist* *Hybrid*

- **Sprinklr Overview:** a $1.86B market cap, AI-powered Customer Experience Management (CXM) platform with $796M in revenue, serving 1,700 clients across marketing, social media, and customer service to deliver human experiences at scale.
- Boosted Product Insights ARR from $1M to $3M+ by enabling enterprise clients (e.g., Samsung, Amazon, Wells Fargo) to extract actionable insights from customer feedback; increasing NLP model accuracy (F1 from 60% to 80%+) across tasks like NER and sentiment analysis by finetuning and quantizing transformers (BERT, XLMR)
- Built an in-house LLM (fine-tuned LLaMA2 with vllm inference) to create an automated cataloging system, eliminating 200+ hours of manual tagging and streamlining product data organization.
- Built a self-service AutoML platform on Streamlit enabling product teams to train, test and deploy models independently, saving 60+ developer hours per month.
- Reduced Docker build times by 50% through image thinning and hardening; enhanced monitoring by integrating health probes into Grafana success-rate dashboards.
- Optimized Kafka-based integration of Product Insight services and improved HTTP-based response times, achieving 100ms P95 latency across 100M+ daily messages and reducing server costs by $2K/month.
- Handled on-call rotations for all ML services, resolving critical incidents and deployment issues to maintain 99.999% availability and ensure uninterrupted customer experience for Fortune 500 clients.
- Mentored two junior engineers on NLP pipeline design, containerization and documentation best practices.

## CERTIFICATIONS, SKILLS & INTERESTS

- **Certifications:** Deep Learning Specialization (Coursera), Kubernetes Hands-on (KodeKloud)
- **Modelling:** HuggingFace, Transformers, LLMs, Model Quantization (ONNX), XGBoost
- **MLOps:** Docker, Kubernetes, Helm Charts, Gitlab CI/CD, Grafana, AWS (S3, EC2), GCP, JIRA
- **Strengths:** Model Building and Deployment, Cost and Latency Optimization, ML Research and Implementation
- **Interests:** Weightlifting; Gaming; Trekking; Travelling; Economics
